## 2090-Series Single Motor Cables

Allen-Bradley single motor cables combine motor power, feedback, and brake conductors all in a single shielded cable. Standard (non-flex) motor cables with rugged SpeedTec DIN connectors are designed for use with Kinetix 5500 drive systems and intended for static applications. Continuous-flex rated cables, intended for rolling, twisting, and reverse bending applications, are also available.

---

**IMPORTANT** Due to the unique characteristics of single-cable technology, designed for and tested with Kinetix 5500 drives and Kinetix VP motors, building your own cables or using third-party cable is not an option.

---

**IMPORTANT** Flying-lead motor power, feedback, and (optional) brake conductors terminate at the drive by using the 2198-KITCON-DSL feedback connector kit. The kit is included with Kinetix 5500 servo drives. Refer to the Kinetix Servo Drives Specifications Technical Data, publication [GMC-TD003](#), for more information on the Kinetix 5500 drive and connector kit.

---

**IMPORTANT** Continuous-flex single motor cables have a minimum bend radius of 10 times the cable diameter.

---

These 2090-Series motor cables with SpeedTec DIN connectors, designed by Rockwell Automation for optimal performance with Kinetix 5500 servo drives and Kinetix VP servo motors, offer best-in-class features and standards compliance. The single-cable design includes power, feedback, and brake conductors. The continuous-flex cable option, cable lengths in 1 m (3.3 in.) increments, and SpeedTec connectors provide machine builders with complete control of the cable requirements in their machines.

## Dimensions - 2090-Series Single Motor Cables

When installing single cable runs between the motor and drive, be careful not to stress the cable by making bends too sharp. Refer to the table below for bend radius definitions and the dimension diagrams that follow when routing cables during system installation.

### Single Cable Bend Radius Definitions

Type of Bend Radius	Type of Cable	Description
Static bend radius	Standard (non-flex)	The static (installation) bend radius and dimension B are 7 times the cable diameter:
	Continuous flex	<ul style="list-style-type: none"> <li>Do not begin a static bend inside dimension B.</li> <li>Use this measurement when routing the cable in a non-flex application between motor and drive (the bend area).                             <ul style="list-style-type: none"> <li>The bend area is where standard (non-flex) or continuous-flex cables can be bent to their specified bend radius.</li> </ul> </li> </ul>
Continuous bend radius	Continuous flex	The continuous bend radius for Bulletin 2090 single motor cables is 10 times the cable diameter. <ul style="list-style-type: none"> <li>Secure the continuous-flexing area, at least 7 cable diameters (dimension B) from each end of the cable, with a rigid mount that prevents the cable from flexing where it connects to the motor or shield clamp.</li> <li>Use this measurement when routing the cable in a continuous-flex application between motor and drive (the continuous-flexing area).                             <ul style="list-style-type: none"> <li>The continuous flexing area is where continuous-flex cables can be flexed repeatedly.</li> </ul> </li> </ul>

## 2090-Series Motor/Actuator Cables

A wide variety of motor/actuator cables with rugged DIN connectors are available for connecting your motion control system. Standard (non-flex) motor power and feedback cables are available for all Allen-Bradley servo motors and actuators. Continuous-flex rated cables, intended for moving applications, are also available. Continuous-flex extension and standard (non-flex) transition cables are also available for your applications that require them.

---

**IMPORTANT** All flying-lead feedback cables require breakout components or connector kits for drive-end terminations. Refer to Breakout Components and Connector Kits beginning on [page 63](#) for catalog numbers and descriptions.

---

**IMPORTANT** Standard (non-flex) cables have a regular maintenance and installation bend radius of 10 times the cable diameter. For flexing applications, continuous-flex cables have an operational bend radius of 12 times the cable diameter.

## 2090-Series Motor/Actuator Cables with SpeedTec DIN Connectors Overview

2090-Series motor/actuator cables with SpeedTec DIN connectors let OEMs and end-users standardize their machines on a common motor cable family. These cables, designed by Rockwell Automation for optimal performance with Allen-Bradley servo drives, servo motors, and linear actuators, offer best-in-class features and standards compliance. Innovative features, configuration options, and accessories provide machine builders with complete control of the cable requirements in their machines.

### SpeedTec DIN Cable Features

- NFPA 79 Compliant
- UL Listed bulk cable with 600V insulation rating for use in cable trays and exposed run applications. Also carries applicable Canadian approvals
  - Type TC-ER: Power-only and power-with-brake cables
  - Type PLTC-ER: Feedback cable optimized for high-resolution feedback motors
- SpeedTec connection system yields ¼-turn quick connections with positive metallic keying
- DESINA compliant jacket coloring (orange for power, green for feedback) for easy identification and separation of cables in a machine
- Cables are included in the Rockwell Automation servo system Declaration of Conformity (DoC)
- Continuous flex cables are suitable for 20 million flex-cycles
  - Continuous-flex cables are also available in extension cable configurations
- Comprehensive accessories optimize the use of cables in machines

## SpeedTec DIN Continuous-flex Extension Cables

Motor power and feedback extension cables provide continuous-flex cable technology between your standard (non-flex) cable and the continuous-flex application. The IP rating for continuous-flex extension cables is consistent with the motor/actuator and cable combination they are extending. Extension cables are available in lengths up to 30 m (98.4 ft). Extension power cables are available in 16, 14, 10, and 8 AWG.

### Typical Extension Cable Application with Bulkhead Adapter

## 2090-Series Motor Power and Feedback Transition Cables

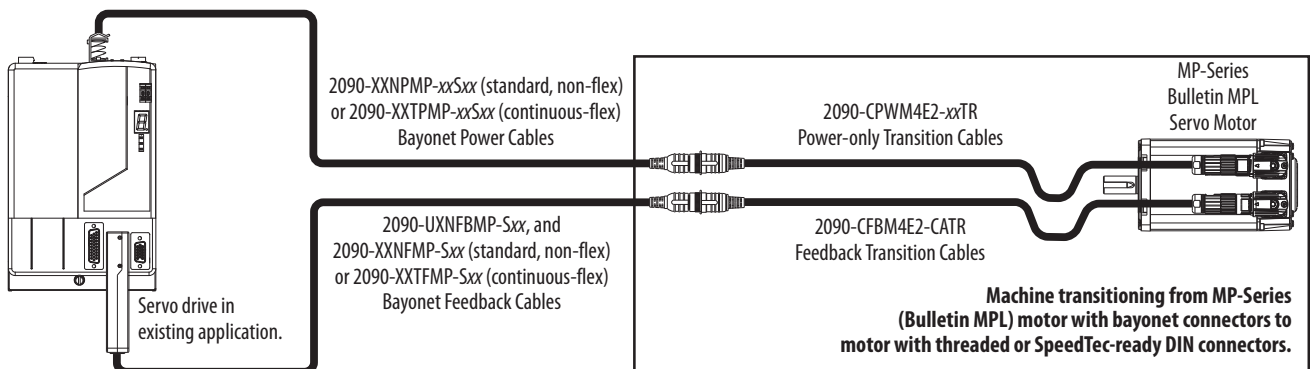

Motor power/brake and feedback transition cables support installations where MP-Series™ (Bulletin MPL) motors with bayonet connectors were recently replaced by the same motor with circular DIN connectors. These 0.5 m (19.7 in.) cables provide a seamless transition between your new motor and existing power, brake, and feedback cables.

**TIP** Brake contacts for motors with bayonet connectors are in a separate connector. Power/brake cables with circular DIN connectors (either threaded or SpeedTec) include brake contacts in the power/brake connector.

### Transition Cable Application (power-only cable)

### Transition Cable Application (power/brake cable)

Refer to the transition cable selection tables on [page 19](#) for cable catalog numbers for the specific Bulletin MPL or Bulletin MPM motor you are transitioning to.

## Circular DIN Connector Compatibility Overview

Motors equipped with either threaded or SpeedTec circular DIN connectors are listed below. Circular DIN motor connectors rotate up to 180° and combine power and brake wires in the same connector.

(1) The LDC-Series™ and LDL-Series™ linear motors, LDAT-Sxxxxxx-xBx linear thrusters, Bulletin MPAS and MPMA linear stages (direct-drive only), and Bulletin RDB direct-drive motors have SpeedTec-ready DIN (M7) motor connectors, but require the additional conductors included with 2090-CFBM7DF-CDAFxx (continuous-flex) and 2090-XXNFMF-Sxx standard (non-flex) cables.

### IMPORTANT

Motors equipped with SpeedTec-ready DIN (M7) connectors are fully compatible with threaded DIN (M4) cable plugs.

- SpeedTec-ready DIN motor connectors are also compatible with SpeedTec DIN (M7/E7) extension cable plugs.
- Motors equipped with threaded DIN (M4) connectors are compatible with only threaded DIN (M4) cable plugs.

## 2090-Series Motor/Actuator Cable Selection

These tables provide flying-lead motor cable catalog numbers for drive/motor combinations. Most motor brake wires are in the power cable, so a separate brake cable is not required (except where noted) The IP rating is dependant on the use of Allen-Bradley Bulletin 2090 cables as listed in these tables.

**IMPORTANT** The MP-Series low-inertia motors on this page are equipped with DIN connectors (specified by 7 in the catalog number) and are not compatible with cables designed for motors equipped with bayonet connectors (specified by 2 in the catalog number). The motors with bayonet connectors (for example, MPL-A310P-xx2xAA) are being discontinued and require 2090-XXNFMP-Sxx (bayonet) cables. For help with migration or to select bayonet cables, contact your Rockwell Automation sales representative.

**Dimensions - Motor Power and Feedback Cables**

When installing cable runs between the motor and drive, be careful not to stress the cable by making bends too sharp. Refer to the table below for bend radius definitions, and the dimension diagrams that follow, when routing cables during system installation.

**Motor Power and Feedback Cable Bend Radius Definitions**

Type of Bend Radius	Type of Cable	Description
Static bend radius	Standard (non-flex)	The static (installation) bend radius and dimension B are 7 times the cable diameter: <ul style="list-style-type: none"> <li>• Do not begin a static bend inside dimension B.</li> <li>• Use this measurement when routing the cable in a non-flex application between motor and drive (the bend area).                             <ul style="list-style-type: none"> <li>– The bend area is where standard (non-flex) or continuous-flex cables can be bent to their specified bend radius.</li> </ul> </li> </ul>
	Continuous flex	
Continuous bend radius	Continuous flex	The continuous bend radius for Bulletin 2090 motor power and feedback cables is 12 times the cable diameter: <ul style="list-style-type: none"> <li>• Secure the continuous-flexing area, at least 7 cable diameters (dimension B) from each end of the cable, with a rigid mount that prevents the cable from flexing where it connects to the motor or shield clamp.</li> <li>• Use this measurement when routing the cable in a continuous-flex application between motor and drive (the continuous-flexing area).                             <ul style="list-style-type: none"> <li>– The continuous flexing area is where continuous-flex cables can be flexed repeatedly.</li> </ul> </li> </ul>

## 2090-Series Interface Cables

A wide variety of communication and interface cables are available for connecting servo drives to ControlLogix® and CompactLogix™ controller modules, and to other Allen-Bradley products.

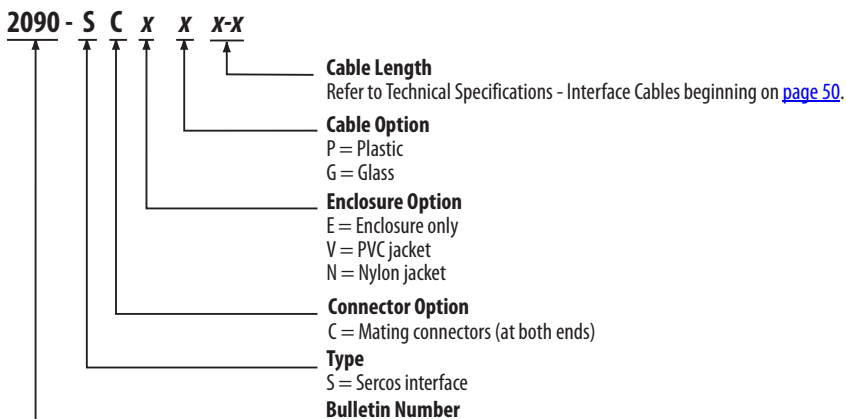

### Catalog Numbers - 2090-Series Interface Cables

Catalog numbers consist of various characters, each of which identifies a specific option for that component. Use the catalog numbering charts below to understand the configuration of your cables. For questions regarding product availability, contact your Allen-Bradley distributor.

#### Control and Configuration Interface Cables

#### Sercos interface Fiber-optic Cables

## Fiber-optic Cable Connection Examples

The length of each transmission section (point A to B) can be up to 32 m (105 ft) for plastic cable and 50...200 m (164.2...656.7 ft) for glass cable. In this example, the second Kinetix 7000 drive is mounted in a separate cabinet and connected with bulkhead adapters.

### Fiber-optic Cable Example for Single-axis Connections

**IMPORTANT** To avoid signal loss, do not use bulkhead adapters to connect glass cables. Use bulkhead adapters only for making plastic-to-plastic cable connections.

Multi-axis servo drives with sercos interface have specific cable lengths for making drive-to-drive connections for single-wide and double-wide modules.

## Ethernet Cable Connection Examples

Shielded Ethernet cable is available in lengths up to 78 m (256 ft). However, the total length of Ethernet cable (point A to point B) connecting drive-to-drive, drive-to-controller, or drive-to-switch must not exceed 100 m (328 ft).

## Kinetix 6000M Hybrid Cables

Kinetix 6000M hybrid cables provide power, control, and communication between the IPIM power interface module (IPIM) and the integrated drive-motor (IDM) units. Kinetix 6000M hybrid cables are available in lengths up to 25 m (82 ft). The maximum combined cable length for all axes daisy-chained from the same IPIM module is 100 m (328 ft). Maximum length for daisy chain is reduced by IDM units with holding brakes and number of IDM inputs used. Refer to Motion Analyzer software, version 6.00 or later, to verify that maximum daisy-chain length is not exceeded. The last IDM unit requires a 2090-CTHP8 hybrid bus terminator (included with each IPIM module).

### Typical Hybrid Cable Application

For example, in this Kinetix 6000M system, if each cable length was the maximum 25 m (82 ft), the combined cable length would be 75 m (246 ft).

### Dimensions - Drive-mounted Breakout Boards

These (CN1) breakout boards apply to Ultra3000 drives (catalog numbers 2098-DSD-005, 2098-DSD-010, and 2098-DSD-020) in applications where 5V DC control power (if required) is user-supplied. The 12-pin board is intended for use with sercos drives, but can be used in non-sercos applications with minimal I/O requirements.

**IMPORTANT** The 2090-U3BB-DMxx is required when wiring to the Ultra3000 (2098-DSD-030-SE/DN, 2098-DSD-075-SE/DN, 2098-DSD-150-SE/DN, or 2098-DSD-HVxxx-SE/DN) sercos/DeviceNet interface drives due to space restrictions when connecting the sercos or DeviceNet interface cables.

#### Drive-mounted Breakout Board Dimensions (catalog numbers 2090-U3BB-DM12 and 2090-U3BB2-DM44)

These (CN1) breakout boards apply to Ultra3000 drives (catalog numbers 2098-DSD-005, 2098-DSD-010, and 2098-DSD-020) in applications where a 24...5V DC converter for control power is required. The 12-pin board is intended for use with sercos drives, but can be used in non-sercos applications with minimal I/O requirements.

**IMPORTANT** Do not use the 2090-U3CBB-DMxx when wiring to the Ultra3000 (2098-DSD-030-SE/DN, 2098-DSD-075-SE/DN, 2098-DSD-150-SE/DN, or 2098-DSD-HVxxx-SE/DN) drives.

IAM modules (catalog numbers 2094-AC32-M05-S, 2094-BC04-M03- $x$ , and 2094-BC07-M05- $x$ ) and AM modules (catalog numbers 2094-BM03- $x$  and 2094-BM05- $x$ ) are double-wide modules and require two slots on the power rail.

The leftmost slot on each power rail is the converter slot, which is used by only the IAM module. All other slots are inverter slots and are used by the AM, IPIM, or shunt module (refer to the figure below). The power rail catalog number indicates the number of available inverter slots.

For example, the 2094-PRS1 power rail contains one inverter slot. This limits the use of this power rail to systems requiring only one inverter slot. Similarly, the 2094-PRS8 power rail contains eight inverter slots. This limits the use of this power rail to systems requiring up to eight inverter slots.

When selecting a power rail, determine the number of inverter slots required by all rail-mounted modules and select a power rail with that minimum number of inverter slots.

**IMPORTANT** If you select a power rail with slots exceeding the minimum required for your system, you must install a 2094-PRF slot-filler module in each unused slot.

**TIP** The Bulletin 2094 power rails ship with a protective cover over the converter and inverter slot pins.

## Bulletin 2094 Shunt Module

The Bulletin 2094 shunt module (catalog number 2094-BSP2) is compatible with Kinetix 6000, Kinetix 6200, and Kinetix 6500 drive families. This section contains specifications and mounting dimensions for the Bulletin 2094 shunt module.

**IMPORTANT** The 2094-BSP2 shunt module is compatible with all 200V-class and 400V-class systems, however, the 2094-BSP2 shunt module is physically larger than the 200V-class drives and additional clearance is required beneath and in front of the module.

### Technical Specifications - Bulletin 2094 Shunt Module

The table below lists the power specifications for the Bulletin 2094 shunt module. Refer to [page 81](#) for tables with the Bulletin 2094 shunt module in combination with an IAM module internal shunt (when present) and the various external passive shunt resistors available for 200V-class and 400V-class drive systems. Use these tables to determine the combination you need based on the requirements of your application.

- (2) Module not part of system configuration.
- (3) Shunt power equals 50 or the sum of the AM module internal shunt ratings.

**IMPORTANT** Use of the 2094-BSP2 shunt module in combination with the 2094-AC09-M02-S IAM module disables the shunt resistor internal to that IAM module. This situation is unique to the 2094-AC09-M02-S IAM module. Shunt resistors internal to adjacent AM modules are not disabled. Refer to the 200V-class Shunt Power Example shown below.

In this example, the continuous shunt power is 300 W. The 50 W resistor in the IAM module is disabled when used in combination with the 2094-BSP2 shunt module. This example is unique to the 2094-AC09-M02-S IAM module.

**Shunt Power Example (catalog number 2094-AC09-M02-S)**

- (6) Use of external shunt module disables internal IAM/AM shunt modules.

## Bulletin 2094 Shunt Power Examples

In this example, the sum of the IAM, AM, and shunt modules equal 500 W of continuous shunt power. Although a 200V-class system is shown, a 400V-class IAM, AM, and shunt module power adds up the same way.

### Shunt Power Example for (200V-class) Kinetix 6000 Drives (without external shunt)

In this example, the sum of the IAM/AM modules and shunt module equal 400 W of continuous shunt power.

**TIP** Shunt power adds up the same way for 200V-class (IAM/AM, and shunt module) systems too.

### Shunt Power Example for Kinetix 6000 Drives (without external shunt)

### Shunt Power Example for Kinetix 6200 or Kinetix 6500 Drives (without external shunt)

**IMPORTANT** When the 2094-BSP2 shunt module is wired to a Bulletin 1394 external shunt module, the IAM/AM (internal shunt) and 2094-BSP2 shunt module is disabled and the continuous shunt power is equal to that of the external shunt module alone.

### Dimensions - Bulletin 2094 Shunt Module

Modules are shown mounted to the power rail and the dimensions reflect that. For replacement connector set catalog number, refer to Connector Sets on [page 87](#).

### Bulletin 2094 Slot-filler Module

The Bulletin 2094 slot-filler module (catalog number 2094-PRF) is compatible with Kinetix 6000, Kinetix 6200, and Kinetix 6500 drive families. Install the 2094 slot-filler module in any unoccupied slot on the Bulletin 2094 power rail.

**IMPORTANT** The 2094-PRF slot-filler module is compatible with all 200V-class and 400V-class systems. Power rail slots not occupied by an IAM, AM, or shunt module, must have a slot-filler module installed.

## Bulletin 2094 Mounting Brackets

The Bulletin 2094 mounting brackets (catalog number 2094-XNBRKT-1) are designed to save panel space by letting you mount the Bulletin 2094 power rail or line interface module (LIM) over the AC line filter.

Each bracket provides threaded holes for mounting the 2094 power rail or LIM (catalog numbers 2094-ALxxS and 2094-XL75S-Cx). The number of brackets required for use with the power rail and LIM are shown in the table below.

Module to Mount	Brackets Required
LIM (2094-ALxxS and -XL75S-Cx)	2
Power rail (PRSx) 1...4 axis	2

## Kinetix Safe-off Components

The safe-off feature is available with Kinetix 6000, Kinetix 6000M, Kinetix 7000, drives and with Kinetix 6200 and Kinetix 6500 drives when the 2094-xx02x-M0x-S0 control modules are used.

You can implement the safe-off function in a single drive or extend it to as many as eight drives in a multiple safety drive configuration. The safe-off connector can also be jumpered to effectively remove the safe-off function (this is the default setting).

## Kinetix 6000, Kinetix 6000M, and Kinetix 7000 Safe-off Components

Kinetix 6000, Kinetix 6000M, and Kinetix 7000 drive families share these safe-off cables and headers.

### Catalog Numbers - Kinetix 6000, Kinetix 6000M, and Kinetix 7000 Safe-off Components

Cat. No.	Description
2090-XNSM-W	Safe-off wiring header for the first drive in multiple safety drive configurations.
2090-XNSM-M	Safe-off middle header for drive-to-drive connections in multiple safety drive configurations with three or more drives.
2090-XNSM-T	Safe-off terminating header for the last drive in multiple safety drive configurations.
1202-C02	Drive-to-drive safety cable for connecting single-wide Kinetix 6000 drives.
1202-C03	Drive-to-drive safety cable for connecting double-wide Kinetix 6000 drives and 2094-SEPM-B24-S (IPIM) modules.
1202-C10	Drive-to-drive safety cable for connections between two Kinetix 6000 power rails, two Kinetix 7000 drives, or from the Kinetix 6000 power rail to Kinetix 7000 drive.

### Safe-off Header Examples

In this example, a single Kinetix 6000 safe-off drive is shown using the wiring plug header with the motion-allowed jumper removed. The second and third drives do not use the safe-off feature, so the motion-allowed jumpers remain installed. This single drive configuration also applies to Kinetix 7000 safe-off applications.

When the motion-allowed jumper is installed on a 2094-SEPM-B24-S IDM power interface module (IPIM), the safe-off feature is disabled on all integrated drive-motor (IDM) units connected to the IPIM module.

#### Typical Single Drive Safe-off Configuration

In this example, system 1 contains two (single-wide) Kinetix 6000 drives using the safe-off feature wired with two (double-wide) Kinetix 6000 drives in system 2. System 2 also includes the 2090-SEPM-B24-S IPIM module. The wiring headers with motion allowed jumpers have been replaced as shown. The third axis in system 1 does not use the safe-off feature, so the wiring header and motion allowed jumper remain installed.

This multiple drive configuration also applies to the Kinetix 7000 drives. When wiring the Kinetix 7000 modules from drive-to-drive, use 1202-C10 cables.

**Typical Multiple Drive Safe-off Configuration**

**IMPORTANT**

Due to the current capacity limitation of the safe-off cable connectors, multiple safe-off drive configurations must not exceed eight Kinetix 6000 or Kinetix 7000 drive modules.

## Line Interface Modules

The Bulletin 2094 line interface module (LIM) is designed to replace many of the common input power devices required for your servo drive system. By using the LIM module, you save panel space and reduce the amount of wiring when compared with individual components mounted separately.

In this example, the 2094-BLxxS module is compared to a similar configuration of discrete components. Auxiliary and control power (230V) is developed from the LIM module three-phase input power.

### Comparing the LIM Module with Discrete Components (catalog number 2094-BLxxS)

An example comparing the 2094-ALxxS module to discrete components would be similar to the example above, but with 230V three-phase input power and without the 460V to 230V step-down transformer.

Examples comparing the 2094-AL09 and 2094-BL02 modules to discrete components would also be similar to the examples above and include the features that apply to those models.

### Drive/LIM Module Compatibility

Drive Family	Drive Cat. No.	Compatible LIM Module Cat. No.
Kinetix 2000	2093-AC05-Mxx	2094-ALxxS, 2094-XL755-C2, 2094-AL09

Kinetix 7000	2099-BM06-S, 2099-BM07-S, 2099-BM08-S	2094-BL755

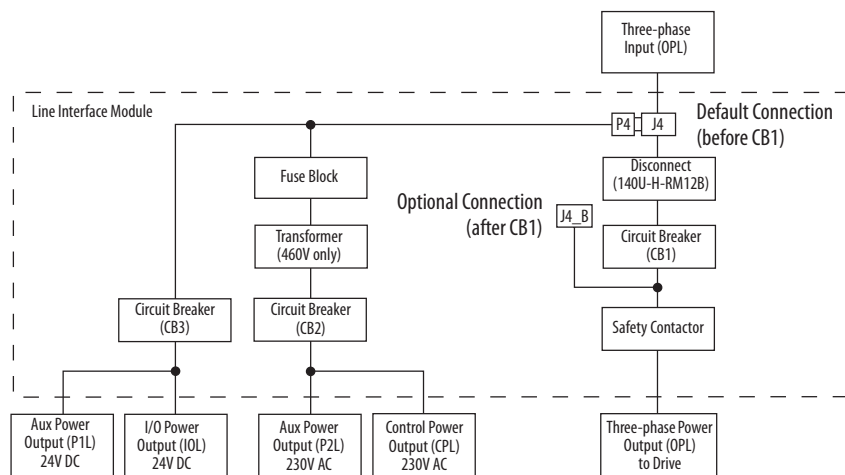

In this example, the 2094-XL75S-C1 and 2094-XL75S-C2 modules are compared to a similar configuration of discrete components. Both of these units provide a connector for an external (customer-supplied) auxiliary and control power input. The 2094-XL75S-C1 module is designed for 110V auxiliary and control power input/output. The 2094-XL75S-C2 module is designed for 230V auxiliary and control power input/output.

Branch circuit protection for the 2094-ALxxS and 2094-BLxxS modules is customer configurable. By moving the CB2/ CB3 wiring harness (P4) from one side of CB1 to the other, you can change the module operation. To understand this option, refer to the simplified block diagram below.

## Resistive Brake Modules

The RBM module provides the opportunity to design safety controls into a machine’s drive system with two key features:

- Physically and electrically separate the drive power output from its corresponding motor.
- Reduce the stopping time for a motor and its load, if a failure occurs.

### Resistive Brake Module Features and Indicators

Catalog Numbers 2090-XB33-xx and 2090-XB120-xx

Item	Description
1	Drive connections (TB1) connector
2	230V AC auxiliary power input (TB4) connector <sup>(1)</sup>
3	I/O connections (TB3) connector
4	Contactor status indicator
5	Auxiliary power status indicator <sup>(1)</sup>
6	Motor connections (TB2) connector
7	Motor cable shield clamps

(1) The 230V AC auxiliary power input (TB4) connector and auxiliary power status indicator are present on only 2090-XB120-xx resistive brake modules.

### RBM Module to Servo Drive Interface Cables

RBM module interface cables (motor power, RBM to drive) are available for Kinetix 6000, Kinetix 6200/Kinetix 6500, and Ultra3000-SE drives. Refer to the table below for specific RBM to drive interface cable information.

Use Motion Analyzer software to match an RBM module to your servo motor compatible with Kinetix 2000, Kinetix 6000, Kinetix 6200, Kinetix 6500, and Ultra3000-SE drive systems.

### IMPORTANT

Drive commands are the preferred and quickest method to bring your drive system to a controlled stop. When using drive commands, the time between braking cycles is limited by the drive/motor/load combination. When the RBM resistors are used to stop the motor, these conditions apply:

- One minute between braking cycles
- Maximum 15:1 motor inertia
- Maximum motor velocity at the start of braking
- Application must not exceed the current rating of the brake module
